What is FileDefender?

FileDefender is an open source program that attempts to stop Ransomware by taking a computer off the network as fast as possible and rolling back its files on start.

How do I get started?

There is an easy installer that can be ran to install the program pre compiled or if you want you can also edit the code and recompile your custom version. **Note:** You may not want to turn off backup on a computer with a lot of files and just have the shut down option on
